

## Module 5 Challenge Submission File

#### **Archiving and Logging Data**

Make a copy of this document to work in, and then for each step, add the solution command below the prompt. Save and submit this completed file as your Challenge deliverable.

#### **Step 1: Create, Extract, Compress, and Manage tar Backup Archives**

1. Command to **extract** the TarDocs.tar archive to the current directory:

tar -xf ~/Downloads/TarDocs.tar

2. Command to **create** the Javaless\_Doc.tar archive from the TarDocs/ directory, while excluding the TarDocs/Documents/Java directory:

tar -cvf Javaless\_Docs.tar --exclude-tag-under=Java ~/Projects/TarDocs

3. Command to ensure Java/ is not in the new Javaless\_Docs.tar archive:

ls /home/sysadmin/Projects/Javaless\_Docs.tar | grep -rw Java \*

#### Optional

4. Command to create an incremental archive called logs\_backup.tar.gz with only changed files to snapshot.file for the /var/log directory:

```
sudo tar --listed-incremental=snapshot.file -cvzf logs_backup.tar.gz
/var/log
```

#### Critical Analysis Question

5. Why wouldn't you use the options -x and -c at the same time with tar? -x extracts files and -c creates them. It is not possible to create a tar file and extract it at the same time.

#### **Step 2: Create, Manage, and Automate Cron Jobs**

1. Cron job for backing up the /var/log/auth.log file:

```
In crontab file: 0 6 * * 3 tar -czf /auth_backup.tgz /var/log/auth.log
```

#### **Step 3: Write Basic Bash Scripts**

1. Brace expansion command to create the four subdirectories:

```
sudo mkdir -p /home/sysadmin/backups/{freemem,diskuse,openlist,freedisk}
```

2. Paste your system.sh script edits:

```
#!/bin/bash
free -h > /home/sysadmin/backups/freemem/free_mem.txt
du -h > /home/sysadmin/backups/diskuse/disk_usage.txt
lsof > /home/sysadmin/backups/openlist/open_list.txt
df -h > /home/sysadmin/backups/freedisk/free_disk.tx
```

3. Command to make the system.sh script executable:

```
chmod +x system.sh
```

#### Optional

4. Commands to test the script and confirm its execution:

```
cat /home/sysadmin/backups/freemem/free_mem.txt
cat /home/sysadmin/backups/diskuse/disk_usage.txt
cat /home/sysadmin/backups/openlist/open_list.txt
cat /home/sysadmin/backups/freedisk/free_disk.txt
```

5. Command to copy system to system-wide cron directory:

```
Sudo cp /home/sysadmin/system.sh /etc/cron.weekly
```

### Step 4. Manage Log File Sizes

1. Run sudo nano /etc/logrotate.conf to edit the logrotate configuration file.

Configure a log rotation scheme that backs up authentication messages to the /var/log/auth.log.

a. Add your config file edits:

```
/var/log/auth.log {
weekly
rotate 7
notifempty
delaycompress
missingok
endscript
}
```

### Optional Additional Challenge: Check for Policy and File Violations

1. Command to verify `auditd` is active:

```
sudo systemctl status auditd
```

2. Command to set number of retained logs and maximum log file size:

```
sudo nano /etc/audit/auditd.conf
```

Add the edits made to the configuration file:

```
max_log_file = 35 num_logs = 7
```

3. Command using auditd to set rules for /etc/shadow, /etc/passwd, and /var/log/auth.log:

```
sudo nano /etc/audit/rules.d/audit.rules
```

Add the edits made to the rules file below:

```
-w /etc/shadow -p wra -k hashpass_audit
-w /etc/passwd -p wra -k userpass_audit
-w /var/log/auth.log -p wra -k authlog_audit
```

4. Command to restart auditd:

```
sudo systemctl restart auditd
```

5. Command to list all auditd rules:

```
sudo auditctl -l
```

6. Command to produce an audit report:

sudo aureport -au

7. Create a user with sudo useradd attacker and produce an audit report that lists account modifications:

sudo aureport -m

8. Command to use auditd to watch /var/log/cron:

sudo auditctl -w /var/log/cron

9. Command to verify auditd rules:

sudo auditctl -l

# Optional (Research Activity): Perform Various Log Filtering Techniques

1. Command to return journalct1 messages with priorities from emergency to error:

sudo journalctl -b -p emerg..err

2. Command to check the disk usage of the system journal unit since the most recent boot:

sudo journalctl -b -u systemd-journald | less

3. Command to remove all archived journal files except the most recent two:

sudo journalctl --vacuum-files=2

4. Command to filter all log messages with priority levels between zero and two, and save output to /home/sysadmin/Priority\_High.txt:

sudo journalctl -p 0..2 > /home/sysadmin/Priority\_High.txt

5. Command to automate the last command in a daily cron job. Add the edits made to the crontab file below:

@daily journalctl -p 0..2 > /home/sysadmin/Priority\_High.txt
